

# **Make the Commitment to Care for Your Trees!**

Plan on spending time each month of the first few years caring for your trees and shrubs. They will require attention in the same way you would cultivate your home garden. Below are suggested monthly maintenance items to ensure your recently planted trees and shrubs will flourish, making a difference for water quality, wildlife habitat and climate resiliency.

#### **JANUARY**

- ☐ Inspect trees and shrubs for disease, insect damage, deer browse and vandalism.
- □ As snow depth increases, rabbits and deer can sometimes reach above tree wraps and other tree protection.

  Checking trees in January can ensure you catch browse activity before too much damage occurs. Adjust tree tubes as needed to ensure your trees are protected.

#### **FEBRUARY**

- ☐ Inspect trees and shrubs for disease, insect damage, deer browse and vandalism.
- □ As snow depth increases, rabbits and deer can sometimes reach above tree wraps and other tree protection. Checking trees in February can ensure you catch browse activity before too much damage occurs. Adjust tree tubes as needed to ensure your trees are protected.

#### **MARCH**

- ☐ Remove any tree tubes from trees with a trunk diameter of 1½ inches or more (see the Maintenance Guide for directions on measuring tree diameter).
- ☐ Clean and straighten tree tubes.
- ☐ Check weed mats and clear off and straighten them as needed.
- ☐ If trees are planted near a sidewalk or street, wash any salt off them while the ground is still frozen.

#### **APRIL**

- ☐ Remove any tree tubes from trees with a trunk diameter of 1½ inches or more (see the Maintenance Guide for directions on measuring tree diameter).
- ☐ Clean and straighten tree tubes.
- ☐ Check weed mats and clear off and straighten them as needed.
- ☐ If trees are planted near a sidewalk or street, wash any salt off them while the ground is still frozen.
- ☐ Celebrate Arbor Day and Earth Day!

#### Tree Care Calendar Continued...
